

AMENDMENTS TO THE SPECIFICATION

Please replace the first paragraph beginning on page 9 of the Substitute Specification filed on March 30, 2005 with the following amended paragraph:

Further, the face plate 2A preferably employs a metal material, for example, having a smaller specific gravity than that of the head main body 2B, for example, titanium alloy. The weight of the head can be distributed more in the peripheral portion of the hitting face F by forming the face plate 2A with the metal material having the smaller specific gravity than that of the head main body 2B. This serves for increasing the sweet area. For example, as shown in ~~FIG. 7~~ FIG. 6, a plurality of face lines 15 constituted by narrow grooves extending in the toe and heel direction are provided on the hitting face F.
